

New Book: Camel Biodiversity - Camel Phenotypes in the Kingdom of Saudi Arabia

This book written by [B. Faye](#) and coll., and published by FAO gives a progress report on the description of the camel phenotypes in Saudi Arabia. The work describes the great ecosystems associated with the various phenotypes and provides quantitative information (measurements) as well as a typology making it possible to distinguish 4 groups of animals. On the whole, 12 phenotypes are described in detail, beautiful photographs with the support.
